

Allianz Income and Growth

Monthly commentary

Investment Objective

The Fund aims at long-term capital growth and income by investing in United States of America ("US") and/or Canadian corporate debt securities and equities.

What Happened in January

Markets finished mixed in January as investors digested economic data, the US Federal Reserve's (Fed's) rate decision, and corporate earnings results. Retail sales and consumer sentiment topped estimates, unemployment remained low, and manufacturing data exhibited signs of bottoming. As expected, the Fed left interest rates unchanged at January's Federal Open Market Committee (FOMC) meeting. Thus far, most companies were exceeding Q4 earnings and sales estimates. Corporate management commentary has been mixed, with optimism tied to the consumer, travel, infrastructure, investment banking, and artificial intelligence (AI), and caution around freight, industrials-related destocking, and automobile inventory.

Equities Market Environment

The S&P 500 Index returned +1.68% for the month, marking an all-time high in the period.* In contrast, the index's equal-weighted version returned -0.69%.*

Five out of eleven sectors had positive performance in January. Communication Services was the best performing sector, followed by Technology, Financials, and Health Care. Real Estate was the worst performer, followed by Materials, Consumer Discretionary, and Utilities.

Equity volatility was higher month-to-month, finishing above 14.*

Convertible Securities Market Environment

The ICE BofA US Convertible Index returned -1.16% for the month.^

Convertible securities were negatively impacted by falling stock prices and credit spread widening.

Most sectors finished lower in January. Telecom, Media, and Technology outperformed, while Materials, Consumer Discretionary, and Consumer Staples underperformed.

Below-investment grade issues outperformed investment grade issues. Equity sensitive issues outperformed yield oriented and total return issues.

New issuance saw eight issues priced, raising USD 2.3 billion in proceeds.^

High-Yield Bond Market Environment

The ICE BofA US High Yield Index returned +0.02% for the month.^

Credit-quality subsector returns for the month^:

- BB rated bonds: +0.08%
- B rated bonds: +0.06%
- CCC rated bonds: -0.39%

Spreads widened to 359 basis points (bps) from 339 bps, the average bond price fell to 92.54, and the market's yield rose to 7.96%.^

Industry performance skewed positive. Retail, Energy, and Autos outperformed, whereas Cable, Telecom, and Technology underperformed.

Trailing 12-month default rates remained low at 2.77% (par) and 2.45% (issues).** The upgrade/downgrade ratio was 0.8.**

New issuance increased month-over-month with 41 issues priced, raising USD 31.6 billion in proceeds.** High-yield funds reported flows of +USD 0.4 billion.**

Portfolio Review

The portfolio was positively impacted by equity market strength.

Top contributors were primarily comprised of technology companies capitalising on secular trends around AI, cloud migration, and cyber security. Upside outliers consisted of multiple semiconductor and software positions including Nvidia as well as Microsoft and Salesforce, which gained ahead of strong quarterly results. Other top contributors were MasterCard on better-than-feared guidance, and a pharmaceutical company on research and development (R&D) scalability and revenue opportunity potential.

Top detractors included an electric vehicle (EV) manufacturer and an ecommerce company on growth concerns. Angst around overseas sales weakness pressured Apple and a chemical company, and production issues negatively impacted

an airframe manufacturer. A residential solar company, a life sciences services provider, and a cellular tower REIT that sold its India business, among others, also underperformed.

Most option positions expired below strike and the portfolio was able to retain the set premiums.

Exposure increased the most in Financials and Communication Services, and decreased the most in Health Care, Materials, and Technology. Covered call option positioning modestly increased month-over-month.

Market Outlook and Strategy

2023's economic momentum should carry over into 2024. Economic tailwinds include low unemployment, steady consumption, government spending, waning inflation, an improving manufacturing sector, an end to the rate hike cycle, and inflecting earnings. Economic headwinds include continued restrictive monetary policy and quantitative tightening, less savings, and US/international political risks, among others.

High-yield credit and convertible securities should be better positioned to weather any market volatility given current asset class dynamics, which in some respects are more favourable today than they were exiting 2022. Consequently, today's market outlook resembles 2023's with mid to high single-digit returns possible by year-end 2024 for high-yield credit, convertible securities, and equities.

The US high-yield market, currently yielding 8%, offers the potential for equity-like returns but with less volatility. Credit fundamentals are stable, near-term refinancing obligations remain low, and management teams continue to prioritise debt reduction. Given these factors, defaults should remain well below historical cycle peaks. The market's attractive total return potential is a function of its discount to face value and higher coupon, which also serves to cushion downside volatility. Notably, after recording an annual decline, the high-yield market has historically delivered two consecutive years of positive returns in six of the seven cases[#], and forward 12- and 24-month return projections based on the current market yield have been consistent with mid to high single digits^{##}.

US convertible securities should continue to provide benefits to investors, including an attractive asymmetric return profile and potentially lower volatility relative to the equity market. The shift in the universe's composition exiting 2022 remains largely unchanged heading into 2024. Many securities offer attractive current yields and exhibit defensive characteristics given lower deltas and closer proximities to bond floors. This dynamic may allow for greater downside protection if equity volatility rises. If the prices of underlying stocks advance, convertible securities could be positioned to participate in the upside. Lastly, higher debt financing costs should draw issuers to the convertible market for coupon savings. As a result, new issuance is expected to increase materially year-over-year.

US equity valuations reside near long-term averages. Visibility around 2024 and 2025 earnings, US dollar and Treasury market stabilisation, and an end to the rate hike cycle could be positive developments for stocks. Any equity market volatility will present opportunities for active managers to take advantage of better prices in attractive investments.

A covered call options strategy can be utilised to generate premium income. In periods of elevated or rising equity volatility, premiums collected may translate into more attractive annualised yields.

Collectively, these three asset classes can provide a steady source of income and a compelling "participate-and-protect" return profile.

The Fund is a client solution designed to provide high monthly income, the potential for capital appreciation, and less volatility than an equity-only fund.

No offer or solicitation to buy or sell securities and no investment advice or recommendation is made herein. In making investment decisions, investors should not rely solely on this publication but should seek independent professional advice. However, if you choose not to seek professional advice, you should consider the suitability of the product for yourself. Past performance of the fund manager(s) and the fund is not indicative of future performance. Prices of units in the Fund and the income from them, if any, may fall as well as rise and cannot be guaranteed. Distribution payments of the Fund, where applicable, may at the sole discretion of the Manager, be made out of either income and/or net capital gains or capital of the Fund. As a result of the payment, the Fund's net asset value is expected to be immediately reduced. The dividend yields and payouts are not guaranteed and might change depending on the market conditions or at the Manager's discretion; past payout yields and payments do not represent future payout yields and payments. Investment involves risks including the possible loss of principal amount invested and risks associated with investment in emerging and less developed markets. The Fund may invest in financial derivative instruments and/or structured products and be subject to various risks (including counterparty, liquidity, credit and market risks etc.). Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Past performance, or any prediction, projection or forecast, is not indicative of future performance.
