

Allianz Income and Growth

Monthly commentary

Investment Objective

The Fund aims at long-term capital growth and income by investing in United States of America ("US") and/or Canadian corporate debt securities and equities.

What Happened in March

Equity, convertible, and high yield markets advanced in March. With the Q4 earnings season winding down, investors focused on economic data and monetary policy. The labour market remained healthy, the services sector stayed in expansionary territory, and consumer sentiment increased. In contrast, the manufacturing sector contracted, and some inflation measures were higher than anticipated. The US Federal Reserve (Fed) kept rates unchanged at March's Federal Open Market Committee (FOMC) meeting, with Chair Jerome Powell suggesting policy easing "at some point this year".

Equities Market Environment

The S&P 500 Index returned +3.22% for the month, marking the fifth consecutive month of gains.*

The market broadened with all 11 sectors finishing higher. Energy was the best performing sector, followed by Utilities and Materials. Consumer Discretionary was the worst performer, followed by Real Estate and Information Technology.

Equity volatility was lower month-to-month, finishing at 13.01.*

Convertible Securities Market Environment

The ICE BofA US Convertible Index returned +2.32% for the month.^

Convertible securities were positively impacted by rising stock prices and credit spread tightening.

Most sectors finished higher with Energy, Consumer Discretionary, and Industrials outperforming, while Materials, Transportation, and Telecom underperformed.

Below-investment grade issues outperformed investment grade issues. Total return (balanced) issues outperformed yield alternative (busted) and equity sensitive issues.

New issuance increased month-over-month with 17 issues priced, raising USD 10.4 billion in proceeds.[^] March's monthly volume was the largest in three years.

High-Yield Bond Market Environment

The ICE BofA US High Yield Index returned +1.19% for the month.[^]

Credit-quality subsector returns for the month[^]:

- BB rated bonds: +1.26%
- B rated bonds: +1.04%
- CCC rated bonds: +1.26%

Spreads narrowed to 315 basis points (bps) from 329 bps, the average bond price rose to 93.18, and the market's yield fell to 7.90%.[^]

Nearly all industries finished higher. Auto, Real Estate, and Retail outperformed, whereas Cable, Packaging/Paper, and Telecom underperformed.

Trailing 12-month default rates remained low at 2.59% (par) and 2.46% (issues).^{**}

New issuance increased month-over-month with 40 issues priced, raising USD 28.3 billion in proceeds.^{**}

Portfolio Review

The portfolio was positively impacted by strength across risk assets.

Top contributors were led by semiconductor holdings, including Nvidia which unveiled a new artificial intelligence (AI) processor, and a memory chip manufacturer that reported a beat-and-raise quarter. General Electric gained on potential spin-off benefits, and Alphabet was higher on AI licensing agreement headlines. A major US bank and an insurance company advanced on margin improvement optimism. An energy producer was higher alongside crude oil and a clean energy company traded up on power consumption forecasts. Other contributors included a financial exchange and delivery services provider.

Top detractors were led by companies navigating slower end markets for electric vehicles (EVs), consumer electronics, and footwear & apparel. Multiple software positions underperformed on sales growth fears and production outlook concerns weighed on an airframe manufacturer. A railroad operator also underperformed.

Most option positions expired below strike and the portfolio was able to retain the set premiums.

Exposure increased the most in Industrials, Financials, and Consumer Staples, and decreased the most in Consumer Discretionary, Information Technology, and Materials. Covered call option positioning increased month-over-month.

Market Outlook and Strategy

2023's economic momentum has carried over into 2024. Economic tailwinds include low unemployment, steady consumption, government spending, waning inflation, a stabilising manufacturing sector, an end to the rate hike cycle, and accelerating earnings. Economic headwinds include continued restrictive monetary policy and quantitative tightening, less savings, and US/international political risks, among others.

US equity valuations reside near long-term averages. Visibility around 2024 and 2025 earnings, US dollar and Treasury market stabilisation, and an end to the rate hike cycle could be positive developments for stocks. Any equity market volatility will present opportunities for active managers to take advantage of better prices in attractive investments.

US convertible securities should continue to provide benefits to investors, including an attractive asymmetric return profile and potentially lower volatility relative to the equity market. The shift in the universe's composition exiting 2022 remains largely unchanged heading into 2024. Many securities offer attractive current yields and exhibit defensive characteristics given lower deltas and closer proximities to bond floors. This dynamic may allow for greater downside protection if equity volatility rises. If the prices of underlying stocks advance, convertible securities could be positioned to participate in the upside. Lastly, higher debt financing costs should draw issuers to the convertible market for coupon savings. As a result, new issuance is expected to increase materially year-over-year.

The US high yield market, yielding nearly 8%, offers the potential for equity-like returns but with less volatility. Credit fundamentals are stable, near-term refinancing obligations remain low, and management teams continue to prioritise debt reduction. Given these factors, defaults should remain well below historical cycle peaks. The market's attractive total return potential is a function of its discount to face value and higher coupon, which also serves to cushion downside volatility. Notably, after recording an annual decline, the high yield market has historically delivered two consecutive years of positive returns in six of the seven cases[#], and forward 12- and 24-month return projections based on the current market yield have been consistent with mid to high single digits^{##}.

A covered call options strategy can be utilised to generate premium income. In periods of elevated or rising equity volatility, premiums collected may translate into more attractive annualised yields.

Collectively, these three asset classes can provide a steady source of income and a compelling "participate-and-protect" return profile.

The Fund is a client solution designed to provide high monthly income, the potential for capital appreciation, and less volatility than an equity-only fund.

Information herein is based on sources we believe to be accurate and reliable as at the date it was made. We reserve the right to revise any information herein at any time without notice. No offer or solicitation to buy or sell securities and no investment advice or recommendation is made herein. In making investment decisions, investors should not rely solely on this publication but should seek independent professional advice. However, if you choose not to seek professional advice, you should consider the suitability of the product for yourself. Past performance of the fund manager(s) and the fund is not indicative of future performance. Prices of units in the Fund and the income from them, if any, may fall as well as rise and cannot be guaranteed. Distribution payments of the Fund, where applicable, may at the sole discretion of the Manager, be made out of either income and/or net capital gains or capital of the Fund. As a result of the payment, the Fund's net asset value is expected to be immediately reduced. The dividend yields and payouts are not guaranteed and might change depending on the market conditions or at the Manager's discretion; past payout yields and payments do not represent future payout yields and payments. Investment involves risks including the possible loss of principal amount invested and risks associated with investment in emerging and less developed markets. The Fund may invest in financial derivative instruments and/or structured products and be subject to various risks (including counterparty, liquidity, credit and market risks etc.). Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Past performance, or any prediction, projection or forecast, is not indicative of future performance.
